

CHATGPTWorkflow 1

● Problem

Missing values in dataset.

CGTW1 - ProblemCGT

CHATGPTWorkflow 1

● Context

Consider a dataset in Excel with missing values in multiple columns, including numerical and categorical fields.

CGTW1 - ContextCGT

CHATGPTWorkflow 1

● Main Point

Identify all missing values and determine the most appropriate method to handle them based on the column type.

CGTW1 - Main PointCGT

CHATGPTWorkflow 1

● Action

Use ChatGPT to analyze the dataset description and suggest how to fill or remove missing values.

CGTW1 - ActionCGT

CHATGPTWorkflow 1

● Output

Dataset with no missing values, where:

- Numerical fields are filled with appropriate statistics (e.g., mean/median)

CGTW1 - OutputCGT

CHATGPTWorkflow 2

● Problem

User does not know which Excel formula to use.

CGTW2 - ProblemCGT

CHATGPTWorkflow 2

● Context

Consider a structured Excel table with columns containing numerical and categorical data.

CGTW2 - ContextCGT

CHATGPTWorkflow 2

● Main Point

Generate the correct Excel formula to calculate a specific metric based on the dataset.

CGTW2 - Main PointCGT

CHATGPTWorkflow 2

● Action

Describe the task in natural language so ChatGPT can produce the formula.

CGTW2 - ActionCGT

CHATGPT

Workflow 2

●

Output

Working Excel formula correctly applied to the dataset, producing the expected result without errors.

COPILOT

Workflow 1

●

Problem

Analyze dataset quickly.

CPL

W1 · Problem

CPL

COPILOT

Workflow 1

●

Context

Consider a dataset already loaded in Excel and formatted as a table.

CPL

W1 · Context

CPL

COPILOT

Workflow 1

●

Main Point

Summarize the dataset to extract key metrics grouped by relevant categories.

CPL

W1 · Main Point

CPL

COPILOT

Workflow 1

●

Action

Use Copilot to generate a PivotTable based on the dataset.

CPL

W1 · Action

CPL

COPILOT

Workflow 1

●

Output

PivotTable showing aggregated values (e.g., sum, average) correctly grouped by categories.

CPL

W1 · Output

CPL

COPILOT

Workflow 2

●

Problem

Dataset contains duplicates or errors.

CPL

W2 · Problem

CPL

COPILOT

Workflow 2

●

Context

Consider an Excel dataset with duplicate rows and inconsistent formatting.

CPL

W2 · Context

CPL

COPILOT

Workflow 2

●

Main Point

Clean the dataset by removing duplicates and standardizing formats.

CPL

W2 · Main Point

CPL

COPILOTWorkflow 2

Action

Use Copilot to detect duplicates and fix formatting issues.

CPLW2 · ActionCPL

COPILOTWorkflow 2

Output

Dataset with:

- No duplicate rows
- Consistent formatting across all columns

CPLW2 · OutputCPL

PYTHONWorkflow 1

Problem

Dataset too large to clean manually.

PYTW1 · ProblemPYT

PYTHONWorkflow 1

Context

Consider a large Excel dataset with thousands of rows and possible inconsistencies.

PYTW1 · ContextPYT

PYTHONWorkflow 1

Main Point

Clean and standardize the dataset automatically.

PYTW1 · Main PointPYT

PYTHONWorkflow 1

Action

Write a Python script to process the dataset.

PYTW1 · ActionPYT

PYTHONWorkflow 1

Output

Clean dataset where:

- Inconsistencies are resolved
- Missing or incorrect values are handled

PYTW1 · OutputPYT

PYTHONWorkflow 2

Problem

Need automated data processing.

PYTW2 · ProblemPYT

PYTHONWorkflow 2

Context

Consider multiple datasets stored in different files that need to be combined.

PYTW2 · ContextPYT

PYTHONWorkflow 2

●Main Point

Create an automated workflow to process and analyze the data.

PYT

W2 · Main Point

PYT

PYTHONWorkflow 2

●Action

Use Python to load, merge, and analyze datasets.

PYT

W2 · Action

PYT

PYTHONWorkflow 2

●Output

Automated pipeline that:

- Combines datasets
- Processes data
- Produces final analysis results

PYT

W2 · Output

PYT

ADD-INSWorkflow 1

●Problem

Dataset lacks important information.

ADD

W1 · Problem

ADD

ADD-INSWorkflow 1

●Context

Consider a dataset missing key attributes that can be retrieved from external sources.

ADD

W1 · Context

ADD

ADD-INSWorkflow 1

●Main Point

Enrich the dataset by adding new relevant information.

ADD

W1 · Main Point

ADD

ADD-INSWorkflow 1

●Action

Use an AI add-in to extract and append new data.

ADD

W1 · Action

ADD

ADD-INSWorkflow 1

●Output

Dataset with additional columns containing relevant and consistent external information.

ADD

W1 · Output

ADD

ADD-INSWorkflow 2

●Problem

Text data is unstructured.

ADD

W2 · Problem

ADD

Context

Consider a dataset containing free-text entries in one or more columns.

ADD

W2 · Context

ADD

Main Point

Transform unstructured text into structured fields.

ADD

W2 · Main Point

ADD

Action

Apply AI-based text transformation functions.

ADD

W2 · Action

ADD

Output

Dataset where text is:

- Organized into structured columns
- Consistent and ready for analysis

ADD

W2 · Output

ADD
